PROJECTS

Sticker Store *Web Application | Jan - Mar 2024*

- Developed a React web app with product display and shopping bag features.
- Managed application state and data fetching using Redux Toolkit.
- Implemented responsive UI with MUI for seamless cross-device experience.
- Source code: <https://github.com/parhamGithub/storeByRedux>

Article Handler *Web Application | Mar - Apr 2023*

- Built a React application for managing authors and articles.
- Handled application state effectively using Redux.
- Ensured responsive design for optimal viewing on various devices.
- Source code: <https://github.com/parhamGithub/Article-handler>

Mix Yadak *Mobile Application | June - December 2024*

- Created a cross-platform store app using Flutter.
- Implemented dynamic category and product listings from the database.
- Designed and integrated Light and Dark modes and conditional features (e.g., discounts).
- Can't show the source code because the project is for a friend's business.
